Old Hands But The Script Is New
McDonald Will Continue ‘Ring Around City’ Probe

The question of whether the Tucson area is to be “bombed”--or at least divided--by the forces of the Air Force continues to frustrate the citizens of the region.

David McDonald, a Tucson resident, has written a letter to the editor of the Tucson Citizen expressing his concern about the long-term effects of the proposed nuclear test site.

McDonald states that the test site will create an unlivable environment for residents and that the proposed nuclear test site is not necessary for national security.

He suggests that the government should consider alternative options for testing and that the test site should be located elsewhere.

The letter was written in response to a previous article in the Tucson Citizen that discussed the potential impact of the proposed test site on local communities.

McDonald’s letter highlights the ongoing debate over the issue and invites readers to share their thoughts on the matter.

Titan Bases Announced

Continued on Page 8

The continued outbreak of pleas for the establishment of a test site in the area has raised the question of whether the proposed nuclear test site is necessary for national security.

The issue has been a source of concern for residents in the region, who fear the potential impact on their quality of life.

In response, the government has announced the establishment of a new test site in the area, which will be used for testing nuclear weapons.

The announcement has been met with mixed reactions, with some residents expressing relief at the news and others continuing to voice concerns.

The government has assured residents that the new test site will be carefully controlled and monitored, and that the tests will be conducted in a responsible manner.

However, the issue remains a source of uncertainty for many, and it is likely that further discussion and debate will take place in the coming weeks.

How To Handle FALSE TEETH More Firmly In Place

If you are having trouble with your false teeth staying in place, here are a few tips that might help:

1. Use a gentle cleaning method: Many people use toothpaste to clean their false teeth, but this can damage the porcelain. It is best to use a soft brush and a gentle cleaning solution.

2. Avoid hot water: Hot water can cause the porcelain to become distorted. Use warm water instead.

3. Use a soft brush: A soft brush will be less likely to scratch the porcelain. It is best to use a gentle, circular motion when brushing.

4. Avoid abrasive products: Abrasive products can damage the porcelain. It is best to avoid using products that contain abrasive materials.

5. Use a soft cleanser: A soft cleanser will be less likely to scratch the porcelain. It is best to use a gentle cleanser that is specifically designed for false teeth.

By following these tips, you should be able to keep your false teeth in place more firmly.
