Air Pollution
Experts Debate
Main Causes

By JOHN RIEHUSEN
City Reporter

The air pollution experts are divided in their views on the main causes of air pollution. The debate continues today.

MELTER EFFECTS

The main cause of air pollution is believed to be the burning of fossil fuels. However, there are other factors that contribute to the problem.

The experts disagree on the relative contributions of different sources of pollution. Some believe that cars and trucks are the primary cause, while others argue that industrial emissions are more significant.

The debate continues as more research is conducted to better understand the causes and effects of air pollution.
