Inclusive Vector Meson Production in Dimuon
Final States at FNAL.*† K. J. ANDERSON, J. G. BRANSON,

THALER. University of Chicago and Princeton University.
In a study of inclusive dimuon production at FNAL, produc-
tion of vector mesons (ρ, ω, φ, and J/ψ1) has been
observed. To effectively study this mass region, track
information is obtained from MWPC's located between the
production target and a 0.1 m thick Fe hadron absorber.
We will present analyses of the mass region M_{μμ} ≤ 1.5
GeV/c². Preliminary cross sections for the ρ-ω, and φ
and dependence of these cross sections on x and p_{T} will
also be presented.
